Community Health Nursing Final Exam

1st Semester 2017-2018

Date: 9 /1 /2018

Time: 3 hours

total(80 marks)

1. Define the following:

(10 marks)

1. Child maltreatment
2. Rehabilitation
3. Rural areas
4. Home visit
5. Urban areas

2. Put true (T) in front of the right statement or false (F) in front of the wrong statement: (10 marks)

(10 marks)

1. Physical abuse of a child is defined as the unintentional use of physical force against a child that results in harm for the child's health, survival, development or dignity T F
2. The health and social consequences of child maltreatment include major harm to the physical and mental health and development of victims. T F
3. The school children need 3400 calories /day. It should be well balanced diet containing all nutrients, vitamins and minerals. T F
4. Pollution is the introduction by man, directly or indirectly of substances or energy into the environment resulting in serious effect to the living resources, and hazards to human health. T F
5. Infection are considered the first cause of maternal mortality

T F

6. Unsanitary home conditions is one of the contraindications for home delivery **T F**

7. Booster doses of DT vaccine are given for school children in Egypt in 1st and 6th year of primary school. **T F**

8. Active immunization against tetanus is done as a routine for all pregnant women, for life long protection, the mother should receive 6 doses **T F**

9. Family planning activities appear to be an effective tool in reducing the risk of child maltreatment by timing pregnancies in relation to the mother's age. **T F**

10. Industrial rehabilitation involves start early in the process of medical treatment that helps in restoring normal body functions. **T F**

Q 3) Read the following sentences carefully and then select the best

answer:

(10 marks)

1. One of the signs of child neglect is

- a) Lack of grooming
- b) Bleeding from the rectum
- c) Anger
- d) All the above

2. The immediate postpartum care for the baby include

- a) Cut the umbilical cord using aseptic technique.
- b) Clear air way
- c) Establish respiration
- d) All the above

3. A high-risk child whose health status makes him susceptible to increase morbidity or mortality as

- a) Low apgar score
- b) Sadness

- c) Withdrawal and fear
 - d) None of the above
4. Prenatal causes of disabilities include the following except
- a) Drugs during labor delivery
 - b) Chromosomal
 - c) Genetic
 - d) Rh factor
5. The Health effects of noise pollution include
- a) Spread of infectious diseases
 - b) Fire hazards.
 - c) Toxic syndromes
 - d) None of the above
6. The major environmental pollution include
- a) Natural pollution
 - b) Man-made air pollution
 - c) Air pollution
 - d) All the above
7. It is important to measure the infant mortality rate; it is often as a marker of the health and welfare of any community which is
- a) 29/1000 live birth
 - b) 21/1000 live birth
 - c) 26/1000 live birth
 - d) None of the above
8. Neonatal Care Program was initiated through
- a) Measuring the blood hemoglobin level
 - b) Monitoring mobility development, hearing & speech

- c) Screening for congenital hypothyroidism
d) None of the above

9. The school age children need about

- a) 2400 calories /day
b) 3000 calories /day
c) 3500 calories /day
d) 2800 calories /day

10. Control of Diarrheal Diseases (CDD) Program has been established the following strategies

- a) Provision of ORS at governmental service and private pharmacies.
b) In-service training of different categories of staff
c) Intensive community education campaign.
d) All the above

Q 4) Complete the following :

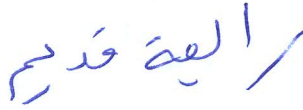

(30 marks)

1. Enumerate 5 factors affecting the child health

- 1.....
2.....
3.....
4.....
5.....

2. List 5 sources of indoor air pollution

- 1.....
2.....
3.....

Date: 2-1-2019

Time: 2 hours

Total score - :80 degree

I-Answer the following questions :-

- 1- Enumerate the **classification** of complementary and alternative medicine groups in nursing and discuss **one** method of them? (20 degree)
- 2- **Definition** of the theory and its **importance**? (15 degree)
- 3- Enumerate **standards** of care? (10 degree)
- 4- Enumerate definition, and benefits of new technological advances and trends in nursing ?(15 degree)

II - Give short account on the following:- (20 degree)

- 1- Cord blood banking
- 2- One method of ART(Assisted Reproductive Technology)

Good Luck

Critical care nursing department

Final Exam of Critical care nursing

Fourth Year

Date: 24/1/2017

Time allowed: 2 hours

Total grades: 40 degree

semester: 1st semester

Part I:- Define the following :

[5 Marks]

1. Weaning
2. Stroke (cerebral vascular accident)
3. Acute hepatic failure
4. Diabetic ketoacidosis
5. Head injury

Part II:- true or false :

[5 Marks]

1. Transient ischemic attacks is a neurological dysfunction caused by occlusion of the blood supply ()
2. Critical care nurse should be inserted gastric tube feeding nasal for patient with fracture base of the skull ()
3. Maintaining blood pressure in higher level (140/90) for patient with hemorrhagic stroke ()
4. Cardiogenic shock occurs due to insufficient cardiac contractility ()
5. Coma can have disturbance for patient with paracetamol poisoning is metabolic alkalosis ()

تشير إلى نطاق المساهمة في تحسين
http://www.svu.edu.eg/arabic/links/camps/qena/nursing/links/ لائحة ٢٠٠٢
٢٠٠٢

Part II- List Five (5) points only for each list:

20 Marks

- a) Weaning tolerance criteria (signs of weaning failure)
- b) Clinical manifestation of head injury
- c) Signs of acidosis & dehydration for patient with DKA
- d) Nursing interventions for Stabilization of the Poisoned or Overdosed Patient

Part VI Choice the correct answer

14 Marks

1- Gastrointestinal Decontamination includes the following except:-

- a) Gastric lavage
- b) Whole bowel irrigation
- c) Bathing the patient every 2 hours
- d) Administration of active charcoal

2-Mr.x admitted to emergency unit with Kussmaul's respiration and
disturbed level of conscious, patient diagnosed diabetic ketoacidosis.
the nurse should be

- a) Monitoring Calcium (Ca) during treatment
- b) Monitoring sodium (Na) during treatment
- c) Monitoring Potassium (K) during treatment
- d) Monitoring magnesium (Mg) during treatment

Part II: Circle (T) if the statement is true and (F) if false (20 Marks two for each)

- 1- In renal failure something must trigger the disease process as stress, virus or hormonal factors. F T
- 2- Changes in the Glasgow coma scale to decreasing score indicate further damage to brain F T
- 3- Dura mater is the tough out most covering of the brain F T
- 4-Synovial Joints usually are not freely movable joints. F T
- 5- Skin traction is applied directly to bone through metal pin. F T
- 6- Hydrotherapy cannot be used in first degree of burn. F T
- 7-Emergent phase of burn Begin from onset of injury to complete of fluid resuscitation. F T
- 8- Nephrostomy means surgical removal of kidney. F T
- 9-Hypotension never results from haemodialysis. F T
- 10- Contusions It is soft tissue injury produced by blunt force or fall. F T

Part III Listing:

(20 Marks one for each)

1- Three factors that causes orthopedic deformity:

1

2

3

2- Three purposes of casts:

1

2

3

3- Three signs and symptoms for seizure:

1

2

3

4- Three principles dialysis is based on:

1

2

3

5- Three goals of fluid replacement therapy in emergency phase of burn:

1

2

3

1

2

3

4

5

(20 marks two for each)

- a- Amputate.
- b- Medullary cavity.
- c- Remove dead bone.
- d- Close the area with casting material

- a- Absence of pain and swelling.
- b- Delayed capillary refill.
- c- Bilateral equal pulses.
- d- All of the above.

- a- 18%
- b- 22%
- c- 45%
- d- 40%

- a- An increase in the total volume of intracranial plasma.
- b- Excessive renal perfusion with diuresis.
- c- Fluid shift from interstitial space.
- d- Fluid shift from intravascular space to the interstitial space.

5- The nurse who is doing dialysis for a patient has no IV access will educate him the advantages of

- a- Peritoneal dialysis.
- b- Frequent genital exposure of the patient.
- c- The presence of the indwelling catheter.
- d- Causing urethral erosion.

6- The nurse includes in the discharge teaching of a patient who has had lithotripsy that patient should.

- a- Check for edema of the legs and ankles.
- b- Watch for stone debris in the urine 1-4 weeks.
- c- Decrease fluid intake to 1000ml /day.
- d- Remain on restricted activity for a week.

7- A patient with chronic renal failure (CRF) is admitted to the urology unit. Which diagnostic test results are consistent with CRF.

- a- Increased PH with decreased hydrogen ions.
- b- Increased serum level of potassium, magnesium and calcium.
- c- Blood urea nitrogen (BUN) 100mg/dl and serum creatinine 6.5mg/dl.
- d- Uric acid analysis 3.5 mg/dl and phenol sufophthalein (PSP) excretion 75%.

8- To prevent a post lumbar puncture headache, the patient is instructed to lie flat for at least 4-6 hours.

- a- Flat.
- b- Setting.
- c- Walking
- d - At home

9- When performing an assessment for patient with increased intracranial pressure, the nurse identifies the following signs and symptoms.

- a- Headache, confusion and vomiting.
- b- Papille dema and anxiety.
- c- Urinary incontinence and vomiting
- d- Nausea and dizziness.

10- Elderly patients who fall are most risk for which of the following injuries.

- a- Wrist fractures
- b- Humerus fractures.
- c- Pelvic fractures.
- d- Hip fractures.

Good Luck

Final Exam of Critical care nursing

Fourth Year

Date: 9/1/2019

Total grades: 80 degree

Time allowed: 2hours

semester: 1st semester

Part I:- Matching definitions from colum A to B :

[10 Marks]

A	B
1. Shock ()	a. is a clot (thrombotic emboli) or fat, tumors, amniotic fluid, air and foreign bodies (nonthrombotic emboli) lodges in the pulmonary arterial
2. Pulmonary odema ()	b. is a clinical syndrome in a patient with advanced liver disease or portal systemic shunting .the onset of encephalopathy is 8-24 weeks from the onset of liver disease characterized by change in personality ,agitation ,confusion ,delirium and coma .
3. Tidal volume ()	c. is a syndrome characterized by decreased tissue perfusion and impaired cellular metabolism. This results in an imbalance between the supply of and demand for oxygen and nutrients
4. Cardiogenic shock ()	d. is characterized by inability of tissue blood flow and oxygen delivery to meet metabolic demands, resulting from failure of the heart to

5. **Complications of spinal cord injury:**

.....
.....
.....
.....

Part IV Choice the correct answer

[20 Marks]

1- One of these consider specific marker for acute liver failure :

- a) Creatinine
- b) Blood urea nitrogen
- c) Triponine
- d) Serum amonia

2- All of these Types of head Injury except one

- a) Contusion
- b) concussion
- c) epidural hematoma
- d) malegnancy

3- distributive shock include:

- a) Anaphylactic shock
- b) Hypovolemic shock
- c) Cardiogenic shock
- d) All of the above

4- the expected value of HCO_3 in metabolic acidosis include:

- a) 22- 26 mEq/L
- b) Less than 22 mEq/L
- c) More than 26 mEq/L
- d) None of the above

5- Modes of Pressure Ventilation include all the following except:

- a) Pressure Support Ventilation
- b) Pressure-Control Inverse Ratio Ventilation
- c) Positive End-Expiratory Pressure

dr. Osa El shiekh

الفرقة الرابعة كلية الإنجليزية

South Valley University
Faculty of Nursing
Fourth Year

Date: 4/6/2018
Time: 2 hours
Second Term

English Language Exam

Answer all the following questions:

I. (A). Read the following passage, and then answer the questions below:

On a warm spring afternoon, Nicole and her brother, Robert, went outside to play. Although their mother told them not to go to the train bridge, Nicole persuaded her brother to go to the bridge to see fish in the river. Three times a day, trains went over the bridge. The children were standing in the middle of the bridge when they heard a loud noise. "A train's coming!" Robert yelled. He ran to the end of the bridge. He was safe. Nicole ran, too, but she fell while the train was coming fast. Nicole ran again, and then she fell a second time. There was no time to get up and run, so Nicole didn't move. She stayed where she was – lying between the rails of the train track. She put her head down and waited for the train to go over her. After the train went over her, Nicole stood up and yelled to Robert, "Don't tell Mom! Don't tell Mom!"

Questions:

1. What did the mother directly say?
2. How many times do trains go over the bridge?
3. What did Nicole do in the second fall?
4. What is the main reason for Nicole and Robert to go out?

(B). Translate the following passage into Arabic:

A few days later Shiro disappeared again. He disappeared this morning, and he came back late at night. When he came back, he was wet and shivering. Shiro began to disappear often. He always disappeared in the morning and came back late at night. He always wet when he came back. Mr. Nakamura was curious. "Where does Shiro go?" he wondered. "Why is he wet when he comes back?"

II. Correct the mistakes in these sentences:

1. I think there are mices behind the cupboard.
2. My birthday is at September.
3. The sun is shining every day in my town.
4. There is a few bread left.
5. I didn't meet him about two weeks yet.

III. Write a well-organized essay on this topic: 'Characteristics of a good nurse'

With best wishes

- a. Aging occurs because of a decrease in the activity of the immune system
- b. Attribute aging to the wear and tear on the body over time as it performs
- c. Views aging as a process of withdrawal from life
- d. The opposite pole from the disengagement theory.

- a. Decrease removal of body wastes
- b. Decrease bladder capacity
- c. Increase risk of infection
- d. Decrease filtration rate

- a. Increase vaginal tissue fragility
- b. Increase risk of infection
- c. Decrease vaginal secretion
- d. Decrease size of vaginal opening

- a. Increase risk of eye injury
- b. Decrease color perception
- c. Decrease diameter of pupil
- d. Decrease night vision

- a. Decrease hair color (graying)
- b. Increase pallor in skin
- c. Increase dry skin
- d. Increase facial hair in women

- a. Increase wrinkling
- b. Increase brittleness of nails
- c. Increase thickening and yellowing of nails
- d. Decrease perspiration

- a. Decrease amount and thickness of hair on head and body.
- b. Increase incidence of brown spots
- c. Increase thickening and yellowing of nails
- d. Decrease perspiration

- a. Increase wrinkling
- b. Increase facial hair
- c. Increase longitudinal ridges of nails
- d. Decrease perspiration

- Decrease amount and thickness of hair on head and body.
- Increase incidence of brown spots

- c. Increase purple patches (senile purpura)
- d. Decrease perspiration

15- Decrease blood supply to muscles leads to:

- a. Increase curvature of the spine
- b. Increase muscle cramps
- c. Decrease height
- d. Decrease mobility and flexibility

**Part III: Write (T) for the true statement & (F) for the false statement
(5 marks/ half for each):**

Statement	
1- Hearing and speech deficit can improve loneliness.	
2- Numerous role changes occur with the aging process.	
3- Decrease muscle tone of the bladder lead to decrease volume of residual urine.	
4- Remote memory loss is not common in elderly.	
5- Tooth loss is a normal consequence of growing old.	
6- Loss of heart muscle contractility leads to increase cardiac out-put	
7- Delayed in micturition reflex lead to urinary incontinence.	
8- Decrease muscle mass leads to increase incidence of bone fracture.	
9- learning activity remains unaltered in elderly	
10- Digoxin is used to strengthen myocardial contractility	

Part IV: List (10 marks):

- 1- Risk factors for falls. (6 Risk factors)
- 2- Minor characteristics of relocation stress syndrome. (6 characteristics)
- 3- Healthy diet principles for elderly persons. (6 principles)
- 4- Why older adults are at greater risk to develop pneumonia? (5 Risks)

GOOD LUCK

English Language Exam

Answer all the following questions:

I. (A). Read the following passage, and then answer the questions below:

On a warm spring afternoon, Nicole and her brother, Robert, went outside to play. Although their mother told them not to go to the train bridge, Nicole persuaded her brother to go to the bridge to see fish in the river. Three times a day, trains went over the bridge. The children were standing in the middle of the bridge when they heard a loud noise. "A train's coming!" Robert yelled. He ran to the end of the bridge. He was safe. Nicole ran, too, but she fell while the train was coming fast. Nicole ran again, and then she fell a second time. There was no time to get up and run, so Nicole didn't move. She stayed where she was -- lying between the rails of the train track. She put her head down and waited for the train to go over her. After the train went over her, Nicole stood up and yelled to Robert, "Don't tell Mom! Don't tell Mom!"

Questions:

1. What did the mother directly say?
2. How many times do trains go over the bridge?
3. What did Nicole do in the second fall?
4. What is the main reason for Nicole and Robert to go out?

(B). Translate the following passage into Arabic:

A few days later Shiro disappeared again. He disappeared this morning, and he came back late at night. When he came back, he was wet and shivering. Shiro began to disappear often. He always disappeared in the morning and came back late at night. He always wet when he came back. Mr. Nakamura was curious. "Where does Shiro go?" he wondered. "Why is he wet when he comes back?"

II. Correct the mistakes in these sentences:

1. I think there are mice behind the cupboard.
2. My birthday is at September.
3. The sun is shining every day in my town.
4. There is a few bread left.
5. I didn't meet him about two weeks yet.

III. Write a well-organized essay on this topic: 'Characteristics of a good nurse'

With best wishes
