Science Direct

ScienceDirect, provided by Elsevier, is the world's largest electronic collection of science, technology and medicine full text and bibliographic information. Science Direct covers over 1800 journals and 7 million online articles.

[More about Science Direct](#)

EBSCO Academic Search Complete

Academic Search Complete, designed specifically for academic institutions, is the world's most valuable and comprehensive scholarly, multi-disciplinary full-text database, with more than 5,500 full-text periodicals, including more than 4,600 peer-reviewed journals. In addition to full text, this database offers indexing and abstracts for more than 9,500 journals and a total of nearly 10,000 publications including monographs, reports, conference proceedings, etc. The database features PDF content going back as far as 1865, with the majority of full text titles in native (searchable) PDF format. Searchable cited references are provided for nearly 1,000 journals.

[More about Academic Search Complete](#)

Ovid International Science Database

ISD (International Science Database) is a comprehensive bibliographic database covering the literature of a wide range of subject areas published since 1990. It contains the bibliographic records of over 10 million articles from 8,000 periodical titles. Indexing terms are in French and English and there are links to full text of free and open access journals.

[Humanities abstracts Database Guide](#)

Wilson Humanities Abstracts FullText

The most comprehensive resource available in its field, Humanities Full Text brings you full text plus abstracts and bibliographic indexing of the most noted scholarly sources in the humanities, as well as numerous lesser-known but important specialized magazines. Humanities Abstracts Full Text contains abstracting and indexing coverage for all 500 periodicals included in Humanities Index as well as the full text of over 160 periodicals.

Matrix Games in the Multicast Networks: Maximum Information Flows With Network Switching

Xue-Bin Liang, *Member, IEEE*

Abstract—Network coding for achieving the maximum information flow in the multicast networks has been proposed by Ahlswede, Cai, Li, and Yeung. They have demonstrated that the conventional network switching, without resort to network coding, is in general not able to achieve the optimum information flow that has been promised by network coding. A basic problem arising here is that, for a given multicast network, what is the *switching gap* of the network defined as the *ratio* of the maximum information flow in the multicast network with network coding to that only with network switching.

In the paper, by considering network switching as a special form of network coding, we make a complete *theoretical* and *computational* determination of the achievable information rate region for *multisource* multicast network switching. The multicast networks are allowed to be cyclic or acyclic with links having arbitrary positive integer or real-valued capacity. Network switching is essentially a problem of multicast-route packing in the multicast networks. Based on this, we use the theory of games to formulate the network switching as a *matrix game* between the first “player” of links and the second “player” of multicast routes in the multicast networks. We prove that the maximum achievable information rate at each probabilistic direction in the information rate region is the reciprocal of the value of the corresponding game. Consequently, the maximum achievable information rate can be computed in a simple way by applying the existing theory and algorithms for the computation of the value of a matrix game, especially for such multicast networks with links all having unit capacity as the Ahlswede–Cai–Li–Yeung multicast networks. For multicast networks with links having arbitrary positive real-valued capacity, by using convex optimization, we develop a simple and efficient iterative algorithm to find the maximum achievable information rates for multisource multicast network switching.

For single-source multicast networks whose links have arbitrary positive real-valued capacity, we present two *max-flow min-cut* theorems. The maximum information flow for single-source network switching is the minimum capacity among all *soft* link-cuts of the multicast network, while the maximum information flow for

same set of sink nodes, we make a comparison between the achievable information rate regions for network switching and network coding.

Index Terms—Achievable information rate regions, game theory, matrix games, max-flow min-cut theorems, maximum information flows, multisource multicast networks, multicast routes, network coding, network switching, route packings, set-covering problems, switching gaps.

I. INTRODUCTION

IN the seminal work of Ahlswede–Cai–Li–Yeung [2], they presented a major discovery that the encoding and decoding for transmitted and received information at every node in the multicast networks can improve the information rates at which the networks can multicast the information of single or multiple sources from the source nodes to their corresponding sets of sink nodes. In the conventional network switching, when the node in the network receives the bit information from its input links, it may replicate the received bit information and forward the copies to other nodes by its output links. In this way, the bit information from the source nodes will arrive at the sink nodes through the multicast routes in the networks. The sink nodes will receive a copy of the bit information sent at the source nodes. Ahlswede–Cai–Li–Yeung [2] found that, from the information-theoretic viewpoint, the node in the network can act as an encoder and a decoder. When the node receives the bit information from its input links, it may not only replicate but also transform the received bit information. The transmitted bit information at the node is a linear or nonlinear transformation of its received bit information. The sink nodes will eventually receive a coded transformation of the original bit information sent at the

MAN-SEOP PARK

Kaldor's "institutional" theory of income distribution revisited: different views on the nature of the corporate economy

***Abstract:** Kaldor's one-sector framework of the "institutional" theory of income distribution is extended to a two-sector setting. This extension requires an explicit consideration of the long-period relationships between the two sectors, and thereby brings to more light two different views on the nature of the corporate economy implicitly represented by Kaldor and by his critics. It is claimed that both of these views omit some important aspects of a fully developed capitalist corporate economy. A third alternative view, which incorporates all of these aspects, is suggested.*

***Keywords:** corporate economy, Kaldor, Pasinetti.*

This paper reconsiders Kaldor's framework of the "institutional" theory of income distribution (Kaldor, 1966) in a *two-sector* setting. This is not an innocent classroom exercise. The extension of a one-sector model to a two-sector one requires a consideration of possible (long-period) conditions that refer to the relationships between the two sectors (and thus do not appear in a one-sector model). Suggesting and looking at these conditions in detail, the disaggregation will bring into sharper relief dif-

خدمة الإمداد بالوثائق للجامعات المصرية

Document Delivery for
Egyptian Universities

الإمداد بالوثائق

يسعى اتحاد المكتبات الجامعية إلى توفير المصادر التي

يطلبها أعضاء هيئة التدريس والباحثين في الجامعات المصرية

والتي لا يمكن الحصول عليها من المصادر المحلية والمكتبة الرقمية

عن طريق الاعتماد علي مستودعات عالمية ومحلية للوثائق

استخدام قواعد البيانات من المنازل

الآن يمكنك الدخول على جميع قواعد البيانات العالمية من المنزل (محدث)

تم تفعيل خدمة الدخول على جميع قواعد البيانات العالمية من المنزل باستخدام كود المستخدم وكلمة السر التي تم الحصول عليها من مكتبات الجامعة.

ولضبط المتصفح ليعمل مع هذه الخدمة من المنزل:

في حالة استخدام خدمة ال DSL:

قم بالذهاب إلى قائمة tools ثم Internet Options ثم من تبويب Connections نضغط الزر Lan Settings ومن النافذة الجديدة نضع علامة صح أول مربعين وهما Automatic detect settings Use automatic configuration script address: <http://www.eulc.edu.eg/proxy> كما في هذه الصورة.

في حالة استخدام ال Dial Up من خلال التليفون:

قم بالذهاب إلى قائمة tools ثم Internet Options ثم من تبويب Connections و من مربع ال Dial-up نختار مزود الخدمة الذي نستخدمه للدخول على الانترنت ثم نضغط الزر Settings ومن النافذة الجديدة نضع علامة صح بجانب أول مربعين

Automatic detect settings Use automatic configuration script address: <http://www.eulc.edu.eg/proxy>
